**Subject:** 2 Sept 2017 -- ASPECT Update 21 -- 2200  
**Attachments:** Arkema IR Trailers 10.JPG

ASPECT is returning to base. The crew has flown about 12.5 hours and needs some rest.

The latest IR continues to show reduced temperature on the northern most trailer (see attached). Spectral data collected on the same pass is showing trace amounts of peroxide (detection limit or about 5 ppm). The proposed plan is rally the crew for a 0730 wheels up on 3 Sept 2017.

Please check email for the daily report.

The team is still working the ftp situation. It is expected that the site should be operational on the morning of 3 Sept 2017. It should be stressed that no data has been lost and any data on the original site will be reloaded. Also, data that is currently active on the n-link will not be impacted.
